## IPL PERMANENT HAIR REDUCTION

IPL (Intense Pulsed Light) uses Ellipse Selective Waveband Technology and dual mode filtering system to safely and effectively remove unwanted hair. Melanin (brown/black pigment) in the hair converts the light energy into heat. This heat is transferred to the hair follicle, which is then destroyed, making it unable to produce a new hair. The treatment is only effective on active hair growth as these are still attached to the follicle. Only hairs with a brown/black pigment can be treated. Clinically proven trials show an 80-95% permanent hair reduction in 6-8 sessions.

**IPL Thread Vein Removal** £50  
For the treatment of broken capillaries Haemoglobin (red protein found in blood) converts the light energy into heat. This heat is transferred to the walls of the blood vessels, which are permanently damaged and removed by the body's own defence mechanism. 2-4 treatments are recommended, neck and face only.

## SEMI-PERMANENT MAKE-UP

### K.B Pro Micro-Blading

Micro-Blading is a semi-permanent eyebrow treatment in which individual eyebrow hair strokes are created by hand, using tiny micro blades. These create channels, allowing pigment to be transferred into the dermal layer of the skin to make the very finest of 'hair' strokes. They can help create thicker fuller brows or give natural brows more definition.

### Eyebrows

from £300

Two treatments are required to achieve maximum results. Treatments are to be taken a minimum of 6 weeks apart until the skin has fully healed. Results can last up to 12 months.
